INTRODUCTION

A Visionary Concept to design and build an intelligent, innovative, production equipment for electronics manufacturing; featuring the latest developments in smart technology. Beautifully crafted automation meets powerful technology to deliver an unmatched experience for programmers and end-users.

YOUR AUTOMATION
JOURNEY BEGINS NOW

PCB HANDLING

We offer a diverse range of material handling equipment and technologies to meet your evolving needs.

Surface Mount

ROBOTICS

From robotic soldering, dispensing, and screw driving robots – multi-axis robot arms and mobile robots; we've got you covered.

Back-End

OVERVIEW

With decades of experience in the industry, our team at PROMATION USA possesses unmatched expertise and knowledge. We understand the unique challenges faced by various industries and have developed a range of innovative solutions to address them.

Our team of engineers and technicians is continuously improving and evolving our products based on the latest technological advancements.

PRECISION IN MOTION

PROMATION USA sets the standard for reliable PCB handling in today's demanding electronics manufacturing environments. Every conveyor, buffer, and transfer system is engineered for precision, durability, and seamless integration with modern SMT lines. Our equipment ensures gentle board transport, consistent alignment accuracy, and long-term operational stability — delivering the quality and consistency trusted by leading OEMs and contract manufacturers worldwide.

BOARD HANDLING

SIGNATURE SERIES SMART TECHNOLOGY

Smart SMT Line Technology redefines manufacturing efficiency through intelligent automation, data connectivity, and adaptive control. Designed for the modern factory, our systems seamlessly link PCB handling, soldering, dispensing, and inspection equipment into a unified, traceable ecosystem. From barcode verification to real-time process monitoring, PROMATION empowers manufacturers with smarter decision-making, higher throughput, and reduced downtime. The result — a fully connected production line built for Industry 4.0 performance.

SMART LINE

TRANSFER

Board Handling

TRANSFER AND WORK TABLE CONVEYORS

Transfer and work table conveyors form the backbone of a reliable SMT line. Built with precision engineering, durable materials, and smooth transfer control, each unit ensures consistent board flow, alignment accuracy, and long-term stability. Our commitment to quality craftsmanship delivers dependable performance you can trust — shift after shift, year after year.

BUFFERING

Board Handling

VERTICAL BUFFERING AND ACCUMULATION

Our vertical buffering and accumulation systems are engineered to keep your SMT line running at peak efficiency. By intelligently managing board flow between process stages, these units prevent bottlenecks, balance throughput, and maximize uptime. Built with precision mechanics and robust construction, PROMATION buffers ensure smooth operation, gentle handling, and long-term reliability that reflects our commitment to quality in every detail.

LINE LOADING

We offer a complete range of intelligent line loading solutions — from automatic destackers and vacuum loaders to magazine-based systems — engineered to meet any production need. Each design ensures smooth, damage-free PCB introduction with precise alignment and consistent handling. Built for reliability and flexibility, PROMATION loading systems deliver the same quality, craftsmanship, and uptime that define our entire SMT automation portfolio.

LINE UNLOADING

PROMATION USA's unloading systems — including magazine unloaders, and restacker solutions — ensure smooth and reliable PCB transfer at the end of every SMT process. Designed for gentle handling, alignment accuracy, and long-term durability, each unit maintains the same high standards of craftsmanship found throughout our automation line. From start to finish, PROMATION delivers performance you can depend on.

COOLING

Board Handling

COOLING BUFFERS AND CONVEYORS

Cooling conveyors and buffer systems ensure stable PCB handling and optimal thermal management immediately following reflow. Designed for consistent airflow, smooth transport, and minimal vibration, these units protect solder joints while maintaining production flow. Built with heavy-duty frames, precision drive systems, and advanced cooling integration, PROMATION delivers the reliability, consistency, and craftsmanship required for high-quality post-reflow performance.

INVERTERS

Board Handling

PCB INVERTERS

PROMATION USA's PCB inverters provide smooth, precise flipping of circuit boards for second-side processing without interrupting line flow. Engineered for accuracy, safety, and repeatability, each inverter maintains board integrity through controlled rotation and gentle clamping. With robust construction and intelligent motion control, PROMATION ensures flawless transitions that keep your SMT line efficient and perfectly balanced.

TURN

Board Handling

TURN STATIONS

Turn stations provide smooth, accurate 90° PCB rotation to optimize line flow and factory layout flexibility. Engineered for precise alignment, repeatable motion, and gentle board handling, each unit ensures seamless transitions between process stages. Built with PROMATION's signature craftsmanship and industrial-grade components, our turn stations deliver long-lasting performance and perfect integration into any SMT line.

PASSAGE

Board Handling

PASSAGEWAY STATIONS

Lift and shuttle gate stations provide safe, ergonomic access points within SMT production lines — allowing operators and technicians to move freely without disrupting product flow. Each system is engineered for precision alignment, smooth motion, and reliable interlock safety. Built from durable materials and designed for seamless integration, our passageway solutions combine functionality, operator safety, and trusted build quality.

WAVE

Board Handling

WAVE LOADING AND UNLOADING

Our wave loading and unloading stations are engineered to safely and efficiently supply and remove PCBs to and from wave solder systems with precision and care. Each unit features smooth transport control, accurate board alignment, and durable construction to ensure consistent performance in demanding environments. Designed for reliability and ease of integration, PROMATION unloading systems protect product quality while maximizing throughput — delivering the dependable performance our customers expect.

SORTING

Board Handling

SORTING SOLUTIONS

PROMATION USA's post-inspection sorting systems ensure flawless handling and traceable routing of PCBs following SPI and AOI processes. Designed for smart integration, these units automatically separate pass, fail, and review boards — maintaining inspection integrity while keeping the line moving efficiently. With precise board control, durable mechanics, and full compatibility with Industry 4.0 data systems, PROMATION delivers reliable automation that enhances both quality assurance and overall line productivity.

FLAT BELT

Board Handling

FLAT BELT CONVEYANCE

PROMATION USA's flat belt conveyors provide consistent, vibration-free PCB transport for a wide range of production environments. Engineered for precision alignment, quiet operation, and long-term durability, each system delivers dependable performance and easy integration into any SMT or assembly line. With robust construction and meticulous attention to detail, PROMATION flat belt solutions embody the quality and craftsmanship that define our brand.

DUAL LANE

Board Handling

DUAL LANE SYSTEMS

PROMATION USA's dual lane systems are engineered for high-volume SMT production, enabling two independent product flows within a single footprint. Designed for maximum efficiency, these systems double throughput while maintaining the same precision, durability, and craftsmanship found across all PROMATION equipment. With intelligent control options and seamless line integration, our dual lane solutions help manufacturers achieve higher productivity without compromise.

SLIDERS

Board Handling

SLIDERS, COMPENSATORS AND COMBINERS

PROMATION USA's sliders and compensators are engineered to optimize SMT line flow and overcome real-world production constraints. Whether used to split a single line into two to relieve bottlenecks or to offset conveyor alignment due to facility layout changes, these systems provide flexible, precise board transfer and positional control. Complementing them, PROMATION's combiners seamlessly merge dual-lane outputs back into one continuous flow — maintaining timing accuracy, product tracking, and process efficiency. Built with rugged construction and smooth servo motion, these modules deliver unmatched adaptability and reliability in any production environment.

Assembly

Board Handling

ASSEMBLY STATIONS

PROMATION USA's assembly station conveyors provide stable, ergonomic work platforms for manual and semi-automated production environments. Each unit is engineered for smooth PCB transfer, precise positioning, and operator comfort — ensuring consistent quality and efficiency at every stage of assembly. Built with heavy-duty materials and configurable options for ESD protection, lighting, and tooling integration, PROMATION delivers assembly conveyors that combine craftsmanship, flexibility, and long-term reliability.

BOAT HANDLING

PROMATION USA's Auer boat handling systems are engineered for precision, reliability, and seamless integration in high-mix, high-value production lines. Designed to accommodate specialized carriers for odd-form or heavy PCB assemblies, each unit ensures smooth transfer, perfect alignment, and secure handling throughout the process. With robust construction, advanced motion control, and flexible line compatibility, PROMATION delivers boat handling solutions that protect your product and enhance overall line efficiency.

ELEVATOR SYSTEMS

PROMATION USA's overhead elevator systems maximize floor space and production flexibility by transporting PCBs above the line for multi-level or crossover applications. Designed for precision motion, quiet operation, and seamless communication with upstream and downstream equipment, these elevators provide smooth, reliable vertical transfer without interrupting line flow. Built with robust steel frames and advanced safety interlocks, PROMATION's overhead systems deliver space-saving efficiency and world-class reliability — the perfect balance of performance and design.

SCANNING

Board Handling

SCANNING CONVEYOR

Our Automatic scanning conveyor provides complete PCB traceability within the SMT line using integrated top and bottom-side barcode scanners. Designed for Industry 4.0 environments, this intelligent system captures every board movement and identification point in real time. With precise alignment, high-speed reading, and seamless data connectivity, it ensures total process visibility and traceable manufacturing control — a critical foundation for Smart Factory automation.

ELEVATORS

Board Handling

AMR MAGAZINE ELEVATOR SYSTEMS

AMR Magazine Elevator Stations enable seamless interaction between automated mobile robots (AMRs) and SMT production lines. These smart stations automatically receive, store, and supply PCB magazines while precisely reorienting them for downstream processing. Integrated elevators handle vertical movement with accuracy and speed, ensuring continuous, hands-free material flow. Designed for flexibility and connectivity, PROMATION's AMR-ready systems bridge automation and logistics — creating a fully autonomous, Smart Factory environment.

STORAGE

Board Handling

MAGAZINE STORAGE SYSTEM

Empty Magazine Storage System provides automated collection and storage of empty PCB magazines, optimizing floor space and operator efficiency. Featuring a built-in elevator and smart retrieval controls, the system seamlessly returns magazines when needed – maintaining continuous production flow and minimizing manual handling in high-volume SMT environments.

STORAGE

Board Handling

SMART STORAGE SYSTEM

PROMATION USA's Smart Full Magazine Storage System securely stores completed PCB magazines and uses an integrated elevator to intelligently recall them on demand. With automated tracking, status recognition, and seamless communication with networked equipment, it enhances production organization, reduces downtime, and supports full traceability in Smart Factory automation. The solution comes fully integrated with PROMATION's Intelligent Line Control Solution and is compatible with autonomous mobile robots.

TOTAL COMMAND. SEAMLESS CONNECTIVITY.

PROMATION USA's Smart Line Control Software empowers manufacturers with unified control and real-time visibility across the entire SMT line. Available in multiple versions, PRO4.0 manages both networked and standalone equipment through a single, intuitive touch interface for fast, coordinated line changeovers. PRO4.2 takes integration further — connecting all networked systems into a centralized front-end PC to enable full or cascading line changeovers with a single command.

Compatible with leading Smart Factory standards such as HERMES, iLNB, and others, PROMATION's intelligent software suite delivers the interoperability, traceability, and flexibility needed to drive true Industry 4.0 performance.

SMART FACTORY

PRECISION. PERFORMANCE. PROMATION.

PROMATION USA delivers a complete line of advanced robotics engineered for the modern electronics manufacturing environment. From superior soldering, precision dispensing, and automated screw driving cells - to mobile transport robots and vision-guided collaborative systems; our technologies combine intelligent motion control, durable design, and seamless line integration. Each solution enhances productivity, accuracy, and traceability — empowering manufacturers to achieve higher quality with less labor and downtime. Backed by American engineering excellence and global service support, PROMATION robotics are redefining automation for the factories of tomorrow.

ROBOTICS

ROBOTIC SOLDERING

Robotic soldering systems deliver precise, repeatable results for even the most demanding PCB assemblies. Designed for accuracy, reliability, and easy programming, our solutions ensure superior solder quality and long-term process stability.

SOLDERING

ROBOTIC DISPENSING

Robotic dispensing platforms provide controlled, repeatable application of adhesives, epoxies, and solder paste. Engineered for precision and clean operation, each system enhances consistency, reduces waste, and supports automated in-line production.

DISPENSING

ROBOTIC SCREW DRIVING

Robotic screw driving systems combine intelligent torque control with high-speed automation to ensure perfect fastening every time. Built for flexibility and continuous operation, they deliver accuracy, repeatability, and reduced operator fatigue.

SCREWING

COLLABORATIVE ROBOTS

Vision-guided collaborative robots bring advanced perception and adaptive motion control to delicate assembly tasks. Safe to work alongside operators, these robots deliver accuracy, consistency, and versatility — redefining human-robot collaboration in electronics manufacturing.

COBOTS

MOBILE ROBOTS

Mobile robots automate material movement across the factory floor with precision and safety. Designed for flexible navigation, smart routing, and seamless integration, they optimize logistics and keep production flowing efficiently.

MOBILE ROBOTS

X-RAY COUNTERS

X-ray component counters provide fast, non-destructive verification of reel inventory. Using high-resolution imaging and automated analysis, they ensure precise component counts, reduce manual errors, and keep production ready without interruption.

X-RAY

PANDA

PANDA INTELLIGENT ROBOTIC SOLDERING

Premium intelligent soldering systems combine precision motion control, real-time process monitoring, and adaptive temperature management to deliver flawless, repeatable solder joints. Engineered for consistency and reliability, these systems reduce operator dependence while ensuring unmatched quality and throughput in high-mix electronic assembly environments..

+ Adaptive IQ

PANDA LASER MARKING

Our premium laser marking platform provides high-speed, permanent identification for PCBs and electronic components. With micron-level accuracy, advanced vision alignment, and multi-wavelength options, each system ensures crisp, traceable marks without contact or contamination. Designed for integration and performance, PANDA laser solutions set the standard for smart manufacturing traceability.

Next Generation

SERVICES

For clients looking to explore the world of laser marking, robotic soldering, robotic screwdriving, and robotic dispensing technology, PROMATION USA offers proof-of-concept testing. For little to no cost, clients can review and submit potential automation candidates for a complimentary risk mitigation assessment. Our team of experts will carefully review process information, craft a superior scope of work report, and provide a detailed analysis of our machines' performance. To schedule time with our automation team and learn more about our complete product offering, contact us today.

AWARD WINNING

For over two decades, PROMATION USA has earned an award-winning reputation built on innovation, integrity, and results. As a leader in electronics manufacturing automation, we don't just supply equipment — we engineer complete solutions that empower our customers to achieve higher efficiency, reliability, and return on investment.

Our commitment to excellence extends far beyond the machine. From concept to commissioning, PROMATION delivers personalized service, responsive technical support, and a partnership built on trust. Every product reflects the craftsmanship, precision, and forward-thinking design that have made PROMATION a preferred choice among world-class manufacturers.

We take pride in moving the industry forward — integrating smarter technologies, sustainable practices, and future-ready automation platforms that redefine what's possible on the factory floor. When you choose PROMATION USA, you gain more than a supplier — you gain a dedicated ally invested in your long-term success.
