NON-BRANDED RANKINGS*

12

COMPETITORS PROFILED

*across 30+ commercial keywords sampled

The verdict: serviceable infrastructure, every layer above it leaks value

Fast CDN, valid sitemap, AI crawlers permitted — but a missing viewport tag hurts all mobile ranking, duplicate clusters split authority four ways, 19 of 21 catalog products have no Product schema, and the site is invisible on every non-branded keyword tested.

45/100

WEBSITE HEALTH

Five issues doing the most damage

01 No viewport meta tag on any page.

Mobile browsers render at desktop width — degrades usability, Core Web Vitals, and mobile-first indexing sitewide. Minutes to fix.

02 Duplicate pages split authority four ways.

Four identical TechMan cobot pages each claim canonical; near-dupes at 93–99%; two live "-copy" URLs; a store page wearing the wrong product's title.

03 Structured data stops at the store.

19 of 21 catalog products have no Product schema; no breadcrumbs, no JobPosting, no Event markup; store markup fails current Google requirements.

04 The business data disagrees with itself.

Wrong street address on Yelp, four phone formats, LocalBusiness schema missing phone/address — and four unrelated "Promation" companies with zero disambiguation.

05 Content erodes the trust the brand earned.

200+ "Make it stand out" placeholder captions, a page describing the wrong product, ~110 pages of 88–91% boilerplate, a scam warning as every page's first element.

Zero non-branded visibility — and why

Live SERP sampling across 30+ commercial and informational keywords found PROMATION absent from all but two. The pages that rank instead are page types the site doesn't have.

What ranks in PROMATION's SERPs

OBSERVED

- Dedicated spec-table product pages (vs. thin marketing stubs with no tables, no prices)
- Consolidated category pages (vs. fragmented, unlinked SKU pages)
- Pages that literally say "**distributor**" — a word the TechMan page never uses
- Buying guides & educational content (the blog is 100% press releases)

The upside

UNCONTESTED GAPS

The highest-value content gaps showed **no strong competition at all**:

- Robotic soldering ROI content
- Soldering robot buyer's guides
- PCB conveyor / handling guides
- Cost & pricing questions in every category — nobody credible answers them

Model-number moat is real: PROMATION already owns page-1 for model-level queries (ET9484E, 9252N, QUICK 9434 — a 5-of-top-8 monopoly). The losses are all at category level, where the site has nothing built to compete.

The site resists its own #1 conversion

The business converts by phone and email — and the site makes both hard.

01 No quote path exists.

"Request a Quote" appears nowhere; most product pages have zero CTAs.

02 The contact form is an 11-required-field wall.

Including full postal address and a required model number; the cookie bar covers the Submit button.

03 Zero tel: links sitewide.

Click-to-call is impossible on mobile for a phone-first business; the number isn't in the header.

04 Conversion assets exist but aren't wired up.

"Submit your PCB for trial today!" is plain text with no link; "Book a Virtual Video Session" has no booking mechanism; the brochure PDF is neither promoted nor gated.

05 Trust points the wrong way.

A 3-line all-caps fraud warning leads every page while real trust assets (awards, IPC certs, free proof-of-concept lab) sit as unlinked body text.

Both analytics and advertising are dead — and nothing was in place to notice

What's installed on the site

VERIFIED IN SOURCE

- Google Tag Manager (GTM-PV6GFMN) — contains **only** Google Ads conversion machinery: 2 conversion tags, enhanced conversions, form-submit triggers
- Google Ads global tag (AW-941699073)
- Universal Analytics (UA-96180315-1) — **dead since mid-2023**, still executing
- **No GA4. No Meta pixel. No Bing UET. No other analytics.**

The Ads account itself

DARK SINCE NOV 2024

All-time impression export: **~9 years of continuous advertising** (typically 100k–500k impressions/month, 2015–2024, peaks at 2.8M) — then a mid-month cliff in Oct 2024 and **zero impressions for 22 straight months**. Pattern suggests billing lapse or suspension, not a deliberate pause.

Implication: since Oct 2024 the business has had no paid presence and no analytics — with tags still wired on every page, pointing at an empty account. Relaunch gate: resolve billing → install GA4 → verify conversions end-to-end → land ads on purpose-built landing pages, never the current site.

Historical goldmine: the dormant account holds a decade of real search-terms and conversion data — the only keyword-demand signal available. Export before touching anything.

Wins on models, loses on categories

The rivals who actually win US searches: Manncorp (benchmark threat, 1,000+ URLs), Fancort (exclusive Japan Unix distributor — most direct rival), Apollo Seiko's US channel, Hentec/RPS, DDM Novastar, TM Robotics.

Content LOSING Manncorp's buying guides win every non-branded query and AI answer sampled. PROMATION has zero guides.	Conversion LOSING Rivals offer demos, free BOM analysis, send-your-part sampling. PROMATION offers an email address.	Social proof LOSING Rivals show rated testimonials and NASA/Boeing logos. PROMATION shows none.
Structured data OPEN LANE Weak across the entire competitor set — uncontested win for whoever ships schema first.	Model SERPs WINNING Page-1 for exact model numbers today. Protect and extend with spec-table pages.	Unique assets UNDERUSED US stock, Kenosha training lab, official QUICK/TechMan source, TITAN-award PANDA — the tariff-narrative counter.

PROMATION's own competitor list, reality-checked

Six research tracks tested the client-named list against ~35 live US SERPs, competitor sitemaps, and raw page markup. Headline: most of the named OEMs barely rank in US search.

CLIENT CLAIM	VERDICT
YJ LINK (handling + laser)	Real product rival, zero US organic presence — Korean-only site, broken sitemap. Trade-show threat, not an SEO threat.
NUTEK	Exclusive Americas distributor's websites are dead — the US search shelf for Nutek-class queries is unguarded.
CTI Systems	= ctisystems.net (Goldston, NC). 67-page site, no schema, empty homepage title, zero SERP appearances. Beatable on fundamentals.
FlexLink	Only named company doing real SEO (2,655 URLs) — but sells line-scale projects. Laser marking is 2025-new, news posts only: 12–18 month window.
"HK Laser"	Misidentified. hklasers.com is parked; HK Laser & Systems sells metal cutting. The #1 ranker for "PCB laser marking machine" is Han's Laser . Confirm with client.
Fisnar • Nordson • GPD	All real, all rank. Nordson unbeatable on head terms; GPD proves the winnable playbook; Fisnar's parent is ~1hr from Kenosha.
Screw driving: "no competitors"	False as stated (Janome, ASG, Sumake, Visumatic all sell benchtop systems) — but the benchtop content position is genuinely open .

Four structural openings repeat in every category

None requires beating a giant head-on.

01 The comparison-SERP vacuum.

"QUICK vs Japan Unix", "[OEM] alternative", "X vs Y" searches are effectively empty across all five product lines. No OEM will name rivals; no distributor has bothered. First-mover opportunity across the whole line card.

02 The schema vacuum.

Of ~15 competitors inspected, only GPD Global runs a real Product-schema program. A \$2.7B company (Nordson) emits only breadcrumbs. A full JSON-LD sweep beats nearly the entire field.

03 The pricing vacuum.

No manufacturer publishes machine prices, and cost questions have no credible answers. A distributor can publish price bands; OEMs structurally can't.

04 Distributor click-capture.

Every Asian OEM loses its US clicks to distributors and marketplaces. PROMATION already wins this game for QUICK — 7 of the top 10 for "QUICK soldering robot distributor USA" — the pattern just hasn't been extended.

YJ Link • Nutek • CTI Systems • FlexLink

YJ LINK

OEM • KOREA

THEIR EDGE

Hardware breadth, trade-show equity, US rep network (Repstronics, IBE), Hyundai/Foxconn-tier installs.

OUR OPENING

Invisible in English search: Korean-only titles, broken sitemap, no US pages — nothing for Google or AI engines to cite.

THE PLAY

English spec pages for every machine type they make; "[type] + USA/SMEMA/price"; "YJ Link alternative with US support".

CTI Systems

OEM • NORTH CAROLINA

THEIR EDGE

Made-in-USA story, 35+ years, parts/service depth — trust copy that lands with defense buyers.

OUR OPENING

67 pages, empty homepage title, no schema, 3 blog posts, zero SERP appearances; brand SERP polluted by used-gear resellers.

THE PLAY

Out-publish on fundamentals within months; borrow their US-service language, pair it with superior breadth.

NUTЕК

OEM • SINGAPORE

THEIR EDGE

37-year reputation, Fortune-500 install base, broadest handling catalog in the named set.

OUR OPENING

US distributor websites dead; own site serves 0 bytes to crawlers; EU resellers rank in US SERPs by default.

THE PLAY

Own Nutek-class queries with US-stock pages + price bands; switcher pages for their orphaned US install base.

FlexLink

OEM • COESIA GROUP

THEIR EDGE

2,655 URLs, 9-locale hreflang, #2 for "PCB handling equipment", US subsidiary, enterprise credibility.

OUR OPENING

Line-scale focus — absent from machine-level and price intent; Organization-only schema; no laser product page yet.

THE PLAY

Skip their head terms; own price/SMEMA/buyer-guide intent; ship the inline laser-marking page before they do (≈APEX 2026).

Japan Unix • Apollo Seiko • Thermaltronics

Japan Unix

OEM • TOKYO

THEIR EDGE

"First soldering robot" (1985) halo; ~564-URL content machine; EN page ranks top-5 for "soldering robot"; Fancort fronts them in 4 of 7 US SERPs.

OUR OPENING

EN pages have no on-page specs and no US contact path — US intent leaks to Fancort, who publishes no spec tables either.

THE PLAY

First real "QUICK vs Japan Unix" comparison wins by default; out-spec both with HTML tables + FAQ schema.

Apollo Seiko

OEM • JAPAN

THEIR EDGE

Since 1969; ranks on 3 of 7 category terms including "laser soldering robot" (L-CAT line).

OUR OPENING

Specs hidden in JPG images + PDFs — invisible to Google and AI. Ownership just changed; "Apollo Seiko alternative" SERP is 100% their own pages.

THE PLAY

Alternatives + comparison pages timed to the transition; continuity-concern copy: US demos, IPC support, trade-in path.

Thermaltronics

OEM • US BRAND

THEIR EDGE

US brand recognition; Curie Heat story; decent TMT-R9800S spec page with certifications.

OUR OPENING

ZERO OF 7

sampled SERPs. No sitemap, no schema, one CTA (a PDF). Ranks only for its own model number.

THE PLAY

"QUICK 9434 vs TMT-R9800S" — becomes the de facto #2 result for their own product's research.

Category findings: PROMATION in only 2 of 7 category SERPs (one page) but owns a total "QUICK 9434" monopoly — replicate that sweep per model. Two SERPs are half USPTO patent PDFs: one buyer's-guide page each takes top-3. "Soldering robot price" is a junk SERP where PROMATION already sits ~#9 — a pricing guide is the fastest win. Nobody publishes install-base numbers. And build the PANDA laser-soldering page before the brand re-anchors to laser *marking*.

ASYS • Han's Laser (the real "HK Laser")

ASYS Group

OEM • GERMANY

THEIR EDGE

Only client-named company ranking for "PCB laser marking machine" (two top-6 results). Exact-match titles, five-model INSIGNUM range, US subsidiary in Georgia.

OUR OPENING

Their firewall blocks non-browser crawlers — a structural AI-search liability. No US-specific content, no educational layer, no comparisons, premium-price perception.

THE PLAY

Outflank: own the traceability/how-to cluster (IPC-1782, "fiber vs CO2 vs UV") they never wrote; publish "PANDA vs INSIGNUM"; let clean crawlable specs become the AI-cited source in a category whose leader is invisible to AI.

Han's Laser

THE REAL "HK LASER"

THEIR EDGE

#1 US slot for the money query, two US domains, ~1,400 articles, 135 products, real US facilities, the set's most complete conversion stack.

OUR OPENING

Chinese-OEM trust gap with defense/medical EMS buyers; machine-translated copy; no Product schema; ranking domain has no sitemap.

THE PLAY

US-support/ITAR-friendly positioning ("PCB laser marking machine USA", "Han's PCB100 alternative"); native-English specs + schema take the rich results and AI citations their volume can't.

PROMOTION baseline: the current /panda-laser-marking page is titled just "PANDA ROBOTICS USA" and carries a robotic-*soldering* meta description — it cannot rank for anything non-branded as-is. Rebuilding it as a real inline-marking product page is priority one in this category.

Fisnar • Nordson EFD • GPD Global

Fisnar

OEM • GERMANTOWN, WI

THEIR EDGE

~50-year brand; parent Ellsworth's e-commerce gives the ecosystem two SERP slots per query; free video-trial hook (they film your fluid dispensing).

OUR OPENING

Only 134 URLs, thin category copy, near-zero schema, no pricing, no application content — and nobody owns the Midwest angle despite them being an hour away.

THE PLAY

"QUICK ET vs F4200N.2" comparisons, price bands, clone the video-trial CTA, own "dispensing robot supplier Wisconsin/Chicago".

Nordson EFD

\$2.7B • DON'T FIGHT HEAD-ON

THEIR EDGE

11,838 URLs, 352 product pages, selector tool, free application labs — 4 top slots on some queries; intrudes even on QUICK branded SERPs.

OUR OPENING

Breadcrumb-only schema; blocks CCBot (AI-corpus gap); zero pricing or cost content; zero comparisons.

THE PLAY

Publish the cost content they structurally can't; own entry-level intent; evict them from QUICK branded SERPs (fix the "-copy" slug, ship Product schema).

GPD Global

THE PLAYBOOK TO COPY

THEIR EDGE

437 URLs outranking giants: 12 application pages, 55 videos, the best schema program in the whole competitive set.

OUR OPENING

Premium-only positioning leaves the entry-level benchtop segment (QUICK ET territory) unaddressed; no price anchoring.

THE PLAY

Run their playbook one tier down: application pages (potting, gasketing, glue dots) with price transparency and "your first dispensing robot" copy.

Found during research: the live site's ranking ET8484 URL is the /et8484-dispensing-robot-copy duplicate slug — because the clean canonical URL is a live 404. Unambiguous fix in the redirect map.

"No real competitors" — tested, and refined into a winnable position

The reality

CLAIM IS FALSE AS STATED

WHO'S ACTUALLY THERE

Janome owns the "desktop" SERP; ASG/Jergens sells US-built tabletop cells; Sumake NA and Visumatic sell turnkey systems; DEPRAG, WEBER, Robotiq, OnRobot and Universal Robots own every broad robotic-screwdriving SERP. PROMATION: zero non-branded rankings across 9 commercial queries; absent from every ranking directory (Metoree, IQS, Thomasnet, DirectIndustry).

The opening

CONTENT POSITION IS OPEN

WHY IT'S STILL WINNABLE

No incumbent has locked the benchtop segment with content: Janome's pages are thin and dated, ASG's are buried, importers are low-trust, and cost questions have no credible answers anywhere. Chinese imports anchor prices at \$1k–6k — exactly the class of machine QUICK sells, minus the US support.

The position to own: "turnkey benchtop screwdriving robot — US stock, US support, applications lab, under ~\$15k." Build the buyer's-guide pillar (cost ranges, benchtop-vs-cobot decision matrix, throughput), pair the YouTube asset with VideoObject schema + transcripts, get listed in the directories that rank, pitch ASSEMBLY Magazine (it appears in nearly every SERP in this niche).

Note for client: the "tremendous YouTube views" claim couldn't be verified externally — pull real numbers from YouTube Studio.

Critical fixes — all platform-neutral, all belong in the new build

#	ACTION	EFFORT
01	Viewport meta tag sitewide — the single highest-impact technical fix	S
02	Consolidate the 4 TechMan pages into one "Authorized TechMan Cobot Distributor — USA" page	M
03	Fix Yelp address + standardize NAP everywhere (site, schema, citations)	S
04	Fix wrong-model copy (store title collision; 9733D/9433D mixup) and 200+ placeholder captions	M
C1	tel: links + phone + "Request a Quote" in a sticky header ; cut the form to 5 fields	S
C3	Install GA4 + conversion events; diagnose the Ads account (dark since Nov 2024)	M
06	Noindex/drop the 101 tag archives (29% of the sitemap); merge near-dupes; retire "-copy" URLs	M
07	Enable product reviews (free aggregateRating schema); repair LocalBusiness + add BreadcrumbList/JobPosting	M
10	Shrink the scam banner to one dismissible line; fix /store and /contact above-the-fold	S

Migration rule: ship the rebuild with the validated 301 redirect map (351 rows, no chains) — every legacy URL points at its new home, or the site loses the equity it has.

Where the growth comes from

Comparison & alternatives program

FIRST-MOVER

~13 pages into verified-empty SERPs: QUICK vs Japan Unix · Apollo Seiko alternative · 9434 vs TMT-R9800S · ET8484 vs Fisnar F4200N.2 · Nordson E-Series alternatives · PANDA vs INSIGNUM · Han's PCB100 alternative · benchtop vs cobot screwdriving...

Category hubs + buyer's guides

7 HUBS

The page type that wins every category SERP the site currently loses — spec tables, FAQ blocks, "distributor" framing, citable definition blocks for AI answers.

Ad landing pages (/lp/)

GATE FOR RELAUNCH

One per product line + top historical converters: query-matched headline, spec table, price anchor, 5-field RFQ above the fold. Ads never relaunch onto the current pages.

Pricing & cost content

DISTRIBUTOR-ONLY LANE

"How much does a [soldering/dispensing/screwdriving] robot cost" — zero credible answers exist in any category. Manufacturers structurally can't publish prices; a distributor can.

Schema sweep

NEAR-UNCONTESTED

Product + Offer + FAQ + VideoObject + BreadcrumbList across the catalog. Only 1 of ~15 competitors does this today.

Authority & trust

TARIFF COUNTER

"Official North American QUICK & TechMan source" + TITAN-award PANDA + Kenosha demo lab + US stock, said explicitly on every page — plus 4–6 testimonials and an install-base number nobody else publishes.

The pre-rebuild package is complete

Delivered (audit/prebuild/)

- **Content inventory** — 348 URLs: keep 209 · rewrite 11 · merge 10 · kill 118
- **Site architecture** — ~160-page target tree, phased, source-cited
- **Page templates** — build specs for all 10 page types
- **301 redirect map** — 351 rows, validated, Next.js + nginx snippets
- **SEO drift baseline** — before-state snapshot for post-launch diffing

Needed from PROMATION

- **Google Ads:** diagnose the dark account (billing?); export all-time search terms — a decade of real demand data
- **Search Console:** no property found — verify via DNS (2 minutes) and grant access
- **Confirm "HK Laser"** (likely Han's Laser) and any YJ LINK/NUTEK relationships
- **YouTube Studio** view counts; **GBP dashboard** review
- Optional: \$50 DataForSEO deposit to put volume numbers on every keyword target

Expected trajectory: shipping the Critical + High fixes moves the composite from 45 into the low 60s; the strategic programs (comparisons, pricing content, hubs, schema) are what take the site from invisible to category contender — into SERPs that are verifiably empty today.
